

Investigation Report

Prepared by the Madison Tech Clinic

Client Name: Chintu

Consultation Start Time: 2025/11/25 11:49:44

This report describes the findings of a Madison Tech Clinic consultation. The report was created using Sherlock 1.1.4, an investigative tool developed by the Madison Tech Clinic. Source code for Sherlock is available at <https://github.com/sophiestephenson/ips-evidence-collector/releases>.

Please see <https://techclinic.cs.wisc.edu> or contact techclinic.madison@gmail.com for more information about the Madison Tech Clinic, Sherlock, or this report.

Consultant Signature: _____

Summary of Findings

The following are automated summaries generated deterministically from the content of this report.

Technology Assessment Questionnaire

The following risks were identified based on the client's responses to the Technology Assessment Questionnaire:

- + Physical access to devices : A person with physical access to devices might be able to install apps, adjust device configurations, and access or manipulate accounts logged in on that device. They can also unlock the device with a PIN, password, or biometrics, which would allow them to access all data on the device.
- + Password compromise : Someone who knows account passwords may be able to access and/or manipulate those accounts.
- + Shared phone plan : A shared phone plan may leak a variety of information, possibly including call history, message history (but not message content), contacts, and sometimes location. The account administrator of the client's phone plan has even more privileged access to this information.
- + Shared accounts : The client has shared accounts with the person of concern. Any information on those accounts can be assumed to be known by the person of concern.
- + Physical access to smart home devices : With physical access to smart home devices, someone could (1) learn private information, for example by querying a smart speaker, or (2) reconfigure the devices to share information or allow remote control.
- + Online access to smart home devices : Someone with online access to a smart home device might be able to gather data (e.g., viewing video recordings or voice commands used) or manipulate the device state (e.g., turning a light off or locking a smart lock.)
- + Physical access to children's devices : A person with physical access to children's devices might be able to install apps, adjust device configurations, and access or manipulate accounts logged in on that device. These changes could allow monitoring of the parent, for example by tracking the children's location when they are with their parent.
- + Shared phone plan (child) : A shared phone plan may leak a variety of information, possibly including call history, message history (but not message content), contacts, and sometimes location. This could include information about the parent, such as their phone number and location when with the children. The plan administrator has even more privileged access to this information.

1 Devices Scanned

Device	Risks Identified
--------	------------------

Device	Risks Identified
Apple i Phone (Model MHGE3 LL/A), Version 17.6.1 (Nickname: Chintu)	+ Risk from app: Chase : Risks identified: App installed without permission.

1 Accounts Checked for Compromise

Account	Risks Identified
google: google	+ Unrecognized devices : There are unrecognized devices currently logged into this account. + Suspicious logins : There are suspicious logins to this account that do not appear to have come from the client. + Compromised recovery information : With access to the recovery contact information, someone can access an account without knowing the password using the 'Forgot password' option. + Two - factor authentication disabled: Without two - factor authentication, others only need the account password to log in.

Technology Assessment Questionnaire

A set of questions used to assess a client's technology risk factors.

Risk of Device Compromise **HUMAN ENTERED**

Question	Response
Do you live with the person of concern?	Yes
Did the person of concern purchase and/or set up any of your devices?	Yes
Which devices did the person of concern purchase and/or set up?	Test Notes ufsjfigbuhcjirhfc vhfksjb guhjkmr sdgfjvnmrbcuyhjnbdhbcnbhjfdnrbj. hrjehfguyrhwjhvbubjrefwuvhrevuurhv
Has the person of concern had physical access to your devices at any point in time?	Yes
To which devices has the person of concern had physical access?	Test Notes ufsjfigbuhcjirhfc vhfksjb guhjkmr sdgfjvnmrbcuyhjnbdhbcnbhjfdnrbj. hrjehfguyrhwjhvbubjrefwuvhrevuurhv
Can the person of concern unlock any of these devices with PIN, password, or biometrics?	Yes

Physical access to devices:
A person with physical access to devices might be able to install apps, adjust device configurations, and access or manipulate accounts logged in on that device. They can also unlock the device with a PIN, password, or biometrics, which would allow them to access all data on the device.

Risk of Account Compromise **HUMAN ENTERED**

Question	Response
How do you remember your passwords?	Paper notes
Please provide more details on how you remember your passwords.	
Do you believe the person of concern knows, or could guess, any of your passwords?	Yes
Which passwords do you believe are compromised, and why?	I keep passwords out in open
Do you share a phone plan with the person of concern?	Yes
If you share a phone plan, who is the family 'head' or plan administrator?	Person of concern
Do you share any accounts with the person of concern?	Yes
Which accounts are shared with the person of concern?	t mobile

Password compromise:
Someone who knows account passwords may be able to access and/or manipulate those accounts.

Shared phone plan:
A shared phone plan may leak a variety of information, possibly including call history, message history (but not message content), contacts, and sometimes location. The account administrator of the client's phone plan has even more privileged access to this information.

Shared accounts:
The client has shared accounts with the person of concern. Any information on those accounts can be assumed to be known by the person of concern.

Risks from Smart Home Devices **HUMAN ENTERED**

Question	Response
Do you have any smart home devices?	Yes
Who installed and set up your smart home devices?	Person of concern
Did the person of concern ever have physical access to the devices?	Yes
Do you share any smart home accounts with the person of concern?	Yes
Can the person of concern access any of the smart home devices via their own smart home account?	Yes

Physical access to smart home devices:
With physical access to smart home devices, someone could (1) learn private information, for example by querying a smart speaker, or (2) reconfigure the devices to share information or allow remote control.

Online access to smart home devices:
Someone with online access to a smart home device might be able to gather data (e.g., viewing video recordings or voice commands used) or manipulate the device state (e.g., turning a light off or locking a smart lock.)

Risks from Children's Devices **HUMAN ENTERED**

Question	Response
If you have children, do they have electronic devices?	Yes
Has the person of concern had physical access to any of the child(ren)'s devices?	Yes
Does the person of concern pay for the child(ren)'s phone plan?	Yes

Physical access to children's devices:
A person with physical access to children's devices might be able to install apps, adjust device configurations, and access or manipulate accounts logged in on that device. These changes could allow monitoring of the parent, for example by tracking the children's location when they are with their parent.

Shared phone plan (child):
A shared phone plan may leak a variety of information, possibly including call history, message history (but not message content), contacts, and sometimes location. This could include information about the parent, such as their phone number and location when with the children. The plan administrator has even more privileged access to this information.

Password Questionnaire HUMAN ENTERED

Question	Response
When did you last update this password (approximately)?	Test Notes ufsjfigbuhcjirhfc vhjfkspb guhjkmr sdgfjvnmrbncuyhjnbdhbcnbhjfdnrbj. hrjehfguyrhwjhvbubjrefwuvhrevuurhv
Does the person of concern know the password for this account?	No
Do you believe the person of concern could guess the password?	No
Do you log into this account using a federated login (e.g., Google, Facebook, Apple)?	No
What other account do you use to log in?	
Do you believe the person of concern has access to the federated account?	

Recovery Settings Questionnaire HUMAN ENTERED

Question	Response
Is there a recovery phone number set for this account?	No
What is the recovery phone number?	
Do you believe the person of concern has access to the recovery phone number?	
Is there a recovery email address set for this account?	Yes
What is the recovery email address?	recovery@gmail.com
Do you believe the person of concern has access to this recovery email address?	Yes

Compromised recovery information:
With access to the recovery contact information, someone can access an account without knowing the password using the 'Forgot password' option.

Screenshot Metadata:

FileModifyDate2025:11:24 21:43:28 - 06:00

FileAccessDate2025:11:25 11:39:23 - 06:00

Two Factor Authentication Questionnaire **HUMAN ENTERED**

Question	Response
Is two - factor authentication enabled for this account?	No
What type of two - factor authentication is used?	
Which phone/email/app is set as the second factor?	
Do you believe the person of concern has access to this second factor?	

Two - factor authentication disabled:
Without two - factor authentication, others only need the account password to log in.
